## Specialty Retail: Secure On-Line Transactions

### Client:

Large Specialty Retailer

### The Project:

Project was designed to implement a secure order entry interface for on-line transactions. Meeting project requirements involved setting up virtual Web Services on DataPower using XML Firewall. DataPower was implemented to translate the incoming HTTP-SOAP calls to ODBC calls on a DB2 database. Both DataPower and DB2 were mounted on a protected network. Digital certificated and authentication using LDAP were used for authentication and SSL was used for transport level security. Multiple indirections/levels of security were used for storage and retrieval of credit cards for maximum security.

### Solutions Details:

- Rack mount DataPower XI50s for QA and production
- Configured XI-50 appliance for networking and clustering
- Developed Firewall policies for Web Service logic
- Setup DataPower for SSL
- Setup DataPower to encrypt/decrypt selected fields in the incoming/outgoing request
- Setup monitoring/logging for DataPower

### Technologies:

WebSphere Application Server 6.0, DataPower XI50, SoapUI for Client, DB2 9.0, Firewalls
