Telecommunications: Federated Identity Management

Client:

Large Telecommunications Provider

The Project:

The goal was to implement Identity Provider scenario in DataPower using Tivoli Federated Identity manager (TFIM). Requests going out from DataPower will have SAML tokens generated with the identity of the user. These tokens will be verified by the Service Provider to make sure that the call can be authenticated.

Solutions Details:

- Setup DataPower with TAM for Authentication and Authorization
- Setup DataPower with TFIM for Federated Identity
- Implemented SSL protection for Web Service Calls
- Implemented custom Style sheets for routing
- Setup monitoring/logging for DataPower

Technologies:

WebSphere Application Server 6.x , DataPower XI50, SoapUI for Client, XML Spy for XSL Development.
